

Manacoh: The Legend

Barbara Lobo

Post-doctoral in Education
Universidad Nacional Tres de Febrero
UNTref, Ar

Once upon a time there was a planet called Uton, a part of the Lunnus Universe. The story begins thousands of years ago on this planet, of unequal society, spaceships, robots, and diverse beings that circulate in the not-too-distant future. Unlike what is imagined the future by the diversity and distribution of wealth, Uton concentrates power in the Calton family, in the figure of billionaire Dr. Gabriel Calton, heir to a wealth of treasure found by his ancestor. What is known about the wealth of the Calton family emerged thousands of years ago in the then Manacoh cave. At that time, Uton was a newly formed planet, full of natural riches and ancestral powers. Like all development, Uton also had its dark period.

It all started with his 1,000th great grandfather named Aquinobah. He was a young man of the Guamã tribe and among the Indians was considered a very powerful warrior. He was able to manipulate the nature of a matter, transforming it into another state and by thought, he had the power to change place in space-time. Legend stated that Aquinobah had obtained this power through the archaeological treasure hidden in the cave of Manacoh, which had this name due to the god Manacoh, a diviner of the future.

Manacoh lived in the cave at the time the gods inhabited the ancient universe. That day he had professed: “when the time is right, an Indian will become my successor”. According to his prophecy, Aquinobah would find his remains in the cave and his power would be transferred to him when his hands touched his brain, still intact with matter and energy.

On this day, he would receive all his power and help the planet evolve; in case anyone had identified that place, bad omen would enchant the power corruption.

The universe conspires in favor of the development of species and, even if it is something inexplicable, it has two sides: the good and the bad, coming from the formation that originated all things. The intelligent principle is a divider of positive and negative energies! So goes humanity: love and hate have always been present.

Samuel grew up in Uton playing with the Indians of the Guaman tribe. He was a normal child until the age of ten, learned to hunt before the age of fifteen. He had a leadership instinct that he used to use during training with the other boys in the tribe.

One day, while walking near the tribe, Samuel had observed Aquinobah entering the Alchemy cave. Hence, he followed him for a long time, until later he had seen the Indian only with the power of his hands removing a large stone that gave to a place, he did not think it existed: the Manacoh cave. It was a sacred and forbidden place. It was at this time that the secret about Aquinobah's powers was discovered by Samuel.

Samuel, who was smart and high spirited, became the Indian's best friend and learned from him to manipulate energies. They became more than friends, confidants, and never returned to the Manacoh cave; this was the agreement between Samuel and Aquinobah. If he failed to comply, his life would end immediately, according to God's prophecy. He did not want to pay to see. Even though, he was ambitious he didn't possess adequate intelligence to turn him into a god. However, being a demigod satisfied his ego.

Aquinobah's powers led him to the Higher School of Science, where he expanded his knowledge inherited from Manacoh. His discovery leveraged the advancement of interplanetary travel. His greatest contribution in the field of science had risen from the study of thought as an energetic charge capable of causing reality to be created only by the thought-form. After his scientific research, it was possible to transfer a body from one place to another and the real-time interspatial journey between the past, the present and the future. Thus, Uton became the great center of research since ancestry and still today continues to contribute to the development of the universe.

After five hundred years... Sin City had become the most important technological center of Uton. Laura saw the development through the windows of her office. She observed the spaceships in the middle of the skyscrapers, while the meeting with investors took place as

videoconferences. Behind her lilac dress, her cool appearance and her intelligence stand out. She had progressed as a woman of corporate brains to run real estate industry flawlessly. She was only twenty-two years old, but had dealt with money, power, and business since she was eighteen.

On the other side of the screen, Armando realized his unrest. He advanced the outcome of the meeting:

— The purchase of the Dense Jungle region is attractive for the project we planned. We must discuss with other partners about their requirements before we complete the deal. Can we meet next week? — says he staring at the camera of his cell phone, after realizing the indisposition of his leader.

— Perfect, Armando! — concludes Laura.

— We await contact for a new meeting; — says Leandro, on the other side of the screen, the largest shareholder of the Calton organizations.

The meeting ends in a matter of seconds with the three greatest millionaires of the century.

Laura was experiencing problems in her family life and professional career. She took over Calton companies just over a year ago. Although he had worked there since very young, he had just noticed strange things in the company's business, done with the authorization of his greatest example, Dr. Gabriel Calton, his paternal grandfather.

Restless, Laura decided to go back in time to find out what might be behind her mistrust. During the meeting she contemplated over that. She had a plan and decided to put it into practice.

Approximately 40 years back..... The Summer holidays were over. School reopened and all had started the academic routine. John Calton woke up late, even after the alarm clock rang a few consecutive times. He turned it off and decided to sleep for another five minutes. The previous night's hang over continued due to his meeting with friends and having fun until so late in the morning.

— Oops! Look at the clock scared at the time ahead, get dressed and leave!

John was the only son of Dr. Gabriel Calton. A teenage prodigy, — “nerdy maximum

level!” — That’s what your father, Dr. Gabriel Calton, used to say.

His first contact with science was through the Microbiology class, early in the course of Biomedicine. After a few months, he still had kept an eye on laboratory classes. He was part of the team led by Professor Dr. Aluizio in the studies for the cure of a rare disease. John and Deborah, supervised by Dr. Aluizio in research, became great friends within the university, but outside of it knew nothing about the young woman who had arrived on campus almost a year ago.

Laura, now in the past is called Deborah, who traveled back in time to settle at Daven University. If all goes well, she will be the daughter of her current friend John, sometime in the future. So she waits, because as far back in time anything can happen!

Deborah and John were concentrating on the research this morning. They knew the responsibility was under their hypotheses:

— I think we discovered the stagnation of the disease! — says Deborah, euphoric!

— You guys are really amazing! — says the teacher followed by further guidance to the duo: — Make the initial protocol with the other species and wait for ten days without further changes. — concludes the teacher.

Some years passed and Deborah participated in other research on climate change, in the certainty that her effort to go back in time would have a positive result there in the future. This would involve his family and the Calton company’s projects.

Science is like this... predestined people discover the secrets that surround the universe.

In the past, Aquinobah’s great mistake was to share his discovery of time travel with Samuel, who began work with evil species to incite evil and the destruction of universal peace and harmony in favor of his ideology of demigod. The collapse of good and evil impacted all other planets orbiting Lunnus. The events followed wars, discord, disunity, and delay in the development of species for a long period. This lasted a few centuries, until the birth of Deborah.

Although the conflict caused imbalance, the Calton family remained in power to spread universal evolution. The collision course occurred when Laura went back in time. This was a promise from Aquinobah at the time of his death, regarding the end of the Calton family’s

corruption. He determined that the beginning of the New Age, the era of planetary evolution, would occur from the birth of the only female granddaughter of his one-thousandth great-grandchild.

Around 40 years later... This meeting established a partnership between Calton companies and investors were concerned about the environmental preservation of the Dense Jungle region. After this contract, the Calton family became the largest investor in the preservation and conservation of species, yielding to the universe a new cycle: the beginning of the Age of Evolution. This was after the trip back in time that Deborah decided to develop research in favor of the environment, in place of real estate ventures that generated power, wealth and bribes to those involved. The universe followed happily ever after until the next trap caused by humans.
